

Figure 1. Schematic diagram of the experimental setup.

The experimental setup is shown in Figure 1. The system consists of a laser source, a beam splitter, a phase shifter, a wave plate, and a detector. The laser source emits a beam that is split into two paths. One path goes through a phase shifter and a wave plate, and the other path goes through a wave plate. The two paths are then recombined and detected by a detector.

The phase shifter is a half-wave plate, which introduces a phase shift of  $\pi$  to the beam passing through it. The wave plate is a quarter-wave plate, which introduces a phase shift of  $\pi/2$  to the beam passing through it. The detector is a photodiode, which measures the intensity of the beam.

• The phase shifter is a half-wave plate, which introduces a phase shift of  $\pi$  to the beam passing through it. The wave plate is a quarter-wave plate, which introduces a phase shift of  $\pi/2$  to the beam passing through it. The detector is a photodiode, which measures the intensity of the beam.
